

# PROTECT

## YOUR HOTEL & FACILITIES FROM ACCIDENTAL SPRINKLER ACTIVATIONS

### Complete Fire Sprinkler Head Protection

Fire suppression systems are designed to protect life, property, and investments. But what guards that system from potential hazards surrounding it every day? Fire sprinkler heads with common wire guards, or no guards at all, are extremely vulnerable to damage. Heads can be easily activated by a maintenance ladder, children throwing objects, or a guest with a hanger. The solution to these liabilities is SprinkGUARD. Our industrial strength guards protect against threats of all types. Hundreds of gallons of water hang over your guest rooms and facilities every minute. Keep them free from unexpected floods and damage with SprinkGUARD.

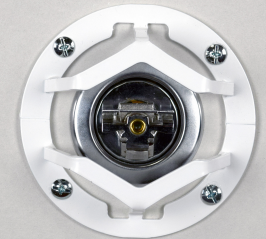

### Rugged Design

Common guards, made of low gauge wire, offer minimal impact protection. SprinkGUARD is a heavy duty guard designed to withstand the impact of virtually any hazard. The solid steel cage helps to prevent accidental sprinkler head contact.

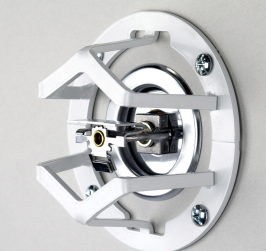

### Innovative Protection

Unlike common guards, SprinkGUARD is anchored directly to the wall surface rather than the sprinkler head. This patented design prevents the guard from making contact with the sprinkler head, eliminating a potential point of vulnerability.

### Trusted Performance

SprinkGUARD is built for performance and safety. All models have been rigorously tested for strength, durability, and spray pattern. They are rated for use with all major sprinkler head manufacturers.

#### Maintains Requirements

Unique design maintains the integrity and functionality of your fire suppression system and its components

#### Smart Risk Management

Provides peace of mind by removing potential safety risks to employees and guests due to accidental activations

#### Protects The Bottom Line

Prevents property damage, remediation, relocation, and insurance expenses while avoiding loss of room and rental income

# REPLACING

## LIABILITIES WITH SOLUTIONS

"We installed SprinkGUARD in 2012 and have not had one false alarm due to broken sprinkler heads."

**RANDY, FACILITY SUPERVISOR**  
**PENNSYLVANIA**

"Being an installer, turned owner, I'm a huge fan of your product. I first saw SprinkGUARD at the NFPA Conference & Expo in Chicago. I will be using SprinkGUARD every chance I get."

**MIKE, FIRE PROTECTION INDUSTRY PROFESSIONAL**  
**ILLINOIS**

"The guards have had a good response from staff. One of them has already been hit and protected the head from damage!"

**JASON, FACILITY MANAGER**  
**KANSAS**

## The SprinkGUARD Difference

### Protection

Patented design enables the guard to attach directly to drywall or other surfaces, preventing contact with the sprinkler head

### Strength

Constructed of heavy duty welded steel, laser cut for precision and uniformity

### Investment

Unmatched durability and powder coated finish makes it a one time purchase

### Design

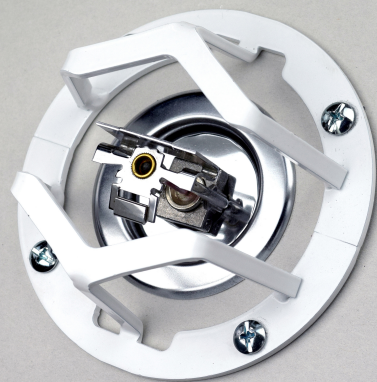

Aesthetically conforming to most applications and available in a variety of colors to match its surroundings

### Versatility

Standard sizes and custom design options available to meet specific applications

### American Made

SprinkGUARD is proudly designed and manufactured in the U.S.A.

## Things To Consider

If each vulnerable sprinkler head in your facility isn't properly protected then you could have an expensive disaster waiting to happen. Here are just a few questions to ask when evaluating the protection of your fire sprinkler heads.

- What is the cost of your hotel or development?
- What would it cost to repair or replace materials, furnishings, and equipment?
- Do you have sprinkler heads that are more susceptible to accidental activation?
- Is your current protection strong enough to withstand impacts of varying force?
- Are you or your employees equipped to handle a broken sprinkler head?
- Can you afford to lose rooms and facilities for a day, week, or even months?
- How much of your time would be involved to manage a sprinkler flood?
- Can your business cover remediation costs until insurance reimbursement?
